

Iyke (devlykee)

Software Engineer, Indie Builder in Web3 and AI Agents
eokorie1911@gmail.com | 09132313421 | lyke.dev | github.com/devlykee | @devlykee | Remote / Nigeria

SUMMARY

Software Engineering student and indie builder shipping production web3 and AI agent products, solo and in small teams. Comfortable owning a project end to end: smart contracts, backend, frontend, and go to market. Primary stack: Next.js, Node.js, Rust, TypeScript, Python.

EXPERIENCE

- Freelance Blockchain Developer, CribX (Contract)**Aug 2026 to Present
- Contracted by CribX, a crypto exchange, to audit and complete a multi-chain deposit system (BTC, ETH, SOL, USDT-TRC20, USDC) within an existing NestJS/Prisma/BullMQ backend
 - Working within existing BitGo custody and Tatum chain-monitoring integrations, delivering unique per-user deposit addresses, automated deposit detection with idempotent crediting, and crypto-to-Naira rate integration feeding an existing PalmPay payout flow
- Community Lead, FBC Blockchain Club (FUTO)**Jan 2026 to Present
- Lead a small team running the club's community and technical presence, including its official website
 - Ran a 30 day daily marathon teaching the club blockchain from scratch (PoW, PoS, Solana PoH)
- Independent Security Researcher**
- Found and privately disclosed a high severity vulnerability in @OpenFairApp's launch flow; team shipped a fix (v2.0) fast and retroactively protected all earlier launches, no user funds lost

SELECTED PROJECTS

- Skimflow** (*skimflow.xyz*)
- Pay per block content monetization platform for humans and AI agents, using x402 micropayments
 - Integrated Circle wallets and USDC settlement on Arc Testnet; deployed a RevenueSplit contract (80% creator share); built an autonomous buyer agent and agent discovery infrastructure
 - Submitted to the Lepton Agents Hackathon (\$50K pool); applied for a \$7,000 Stacks Endowment grant
- Covenant** (*thecovenant.vercel.app*)
- Conditional treasury platform on FlowVault (Stacks) that releases funds only after independent judge attestation
 - Won 2nd place (\$200) in the FlowVault hackathon**
- FBC Club Site**
- Official website for FBC (Next.js, Supabase) with signup and referral tracking, a live leaderboard, Hall of Fame, and Core Team pages
- OSUSU**
- Solana based digital ROSCA platform digitizing Ajo/Esusu savings circles, with naira to USDC on/off ramp; authored full spec covering escrow, majority vote payout governance, and default handling
- Freelance Escrow**
- Solo entry for Ethereum Lima Hackathon 2026 (Arbitrum track): a Stylus powered on chain escrow with AI based dispute resolution for freelance milestone payments

OTHER WINS AND CONTRIBUTIONS

- Won the PayRam thread contest bounty on Superteam Earn
- Built and submitted solana-surgeon-skill (PR #62 to solanabr/skill-bounty), an agent skill for surgical Solana development
- Developed two AI video agent tools (VideoForgeAgent, MinecraftCast) for the CROO Agent Store hackathon
- Conducted a technical audit of CredChain, a web3 talent and credential platform

EDUCATION

Federal University of Technology Owerri (FUTO), B.Eng. Software Engineering2023 to 2028 (in progress)

SKILLS

Languages/Frameworks: TypeScript, Rust (Stylus), Python, Next.js, Node.js
Web3: Solana, Stacks (Clarity, SIP-010), Arbitrum/Arc, x402, EIP-712, smart contract design
Infra: NestJS, Prisma, PostgreSQL, Redis/BullMQ, Supabase, Circle wallets/USDC settlement, Ghost CMS integration, BitGo, Tatum, PalmPay
Tools: Git/GitHub, Vercel, Termux + proot Ubuntu
